

Easy QR

How to Make a QR Code You Can Edit Later

1

Create your account and add a dynamic QR code

Sign up for an Easy QR account and paste in the link you want people to land on. We turn it into a dynamic QR code that lives in your dashboard.

2

Download it and print it like any other code

Grab the high-resolution PNG, JPG, or SVG and put it wherever you like — yard signs, packaging, business cards, posters.

3

Change the destination any time you want

Pop into your dashboard, open the code, type in the new link, and save. The printed code looks exactly the same, but every new scan goes to the updated link.

4

Keep an eye on your scans

You can see how many times the code was scanned, plus the time, country, and device — a simple way to tell what is working, with nothing extra to set up.

Make your own QR code → easyqr.ca/dynamic-qr-codes

easyqr.ca/dynamic-qr-codes

Scan the code or visit the URL to get started.
