

# How to Turn a PDF Into a QR Code

1

## Put your PDF on Google Drive

Drag the file into Google Drive to upload it.

2

## Let anyone with the link open it

Right-click the file, choose Share, and switch "Restricted" to "Anyone with the link." Skip this and the people who scan will be locked out.

3

## Copy the link

It will look something like <https://drive.google.com/file/d/.../view?usp=sharing>.

4

## Paste the link into Easy QR

Drop it into the box, tap "Create QR Code," and download the PNG, JPG, or SVG.

5

## Give it a scan before you print

Always test a QR code with your own phone first. If it shows a "Request access" screen, the sharing setting still needs fixing.

Make your own QR code → [easyqr.ca/pdf-to-qr-code](https://easyqr.ca/pdf-to-qr-code)

[easyqr.ca/pdf-to-qr-code](https://easyqr.ca/pdf-to-qr-code)

Scan the code or visit the URL to get started.
