

Easy QR

# How to See Who Scans Your QR Code

1

## Make a dynamic QR code on Easy QR

Create an account and paste in your link. Only dynamic QR codes can keep track of scans — static ones have no way to count.

2

## Print it, post it, share it

Yard signs, packaging, business cards, slides, posters, social posts — anywhere a phone camera can find it.

3

## Check your analytics

Every code gets its own page showing total scans, scans over time, which countries they came from, and what kind of device people used.

4

## Put your codes side by side

Use a different code for each campaign, location, or print run. The dashboard makes it easy to spot the winner so you can put more effort where it pays off.

5

## Download your numbers

Export your scan history as a CSV any time, so you can dig into it in a spreadsheet or whatever tool you prefer.
